CERTIFIED MAIL – RETURN RECEIPT REQUESTED

James Bearzi, Chief
Hazardous Waste Bureau
New Mexico Environment Department
2905 Rodeo Park Drive, Bldg. 1
Santa Fe, New Mexico 87505

Subject: Response to September 28, 2010, New Mexico Environment Department comments
on the Mixed Waste Landfill (MWL) Toluene Investigation Report

Dear Mr. Bearzi:

On behalf of the Department of Energy/National Nuclear Security Administration (DOE/NNSA), and Sandia Corporation (Sandia), DOE/NNSA is submitting responses to the comments provided in your September 28, 2010 letter entitled, “*Notice of Disapproval: Mixed Waste Landfill Toluene Investigation Report, August 2010, Sandia National Laboratories*,” Environmental Protection Agency Identification Number NM5890110518, HWB-SNL-10-011. The report presents an evaluation of MWL and Sandia National Laboratories/New Mexico site wide groundwater monitoring toluene results. Results of the recent purging/sampling study conducted at all of the MWL groundwater monitoring wells, and other studies designed to determine the source(s) of the toluene detected in groundwater samples.

The comment responses and a revised version of the report are provided as enclosures. The revised report includes corrected pages and is being issued with “*Revised October 2010*” on the cover, along with a brief note added to the Executive Summary explaining the reason for the revision. The report is being distributed to all who received the August 2010 report.

Should you have any questions regarding this report, please feel free to contact me at (505) 845-6036, or John Gould of my staff at (505) 845-6089.

Sincerely,

Patty Wagner
Manager

CERTIFICATION STATEMENT FOR APPROVAL AND FINAL RELEASE OF DOCUMENTS

Document title: **DOE/Sandia Responses to NMED's Comments in "Notice of Disapproval: Mixed Waste Landfill Toluene Investigation Report, August 2010"**

Document author: **Mike Mitchell, Department 06765**

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

DOE/Sandia Responses to NMED's “Notice of Disapproval: Mixed Waste Landfill Toluene Investigation Report, August 2010”

INTRODUCTION

This document responds to the comments received in a letter from the New Mexico Environment Department (NMED) to the U.S. Department of Energy (DOE) and Sandia Corporation (Sandia) dated September 28th, 2010 regarding the Mixed Waste Landfill (MWL) Toluene Investigation Report for Sandia National Laboratories (SNL). The letter is entitled “Notice of Disapproval: Mixed Waste Landfill Toluene Investigation Report, August 2010, Sandia National Laboratories”, EPA ID NM5890110518, HWB-SNL-10-011.

The NMED letter contains two comments. This document provides the DOE/Sandia response for each of the comments.

This document lists each NMED comment, and DOE/Sandia’s response to that comment. The NMED comment is listed in boldface, followed by the DOE/Sandia response, written in normal font under “Response”.

The revised report, dated October 2010, is provided as a separate enclosure. It includes corrected pages along with a brief note added to the Executive Summary explaining the reason for the revision.

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy’s National Nuclear Security Administration under Contract DE-AC04-94AL85000.

Comments on the MWL Toluene Investigation Report

1. Section 2.3.3.1, end of Page 2-12 - The last sentence on the page is incomplete. The Permittees must complete the sentence and also provide any other information that may be missing, if any.

Response: The missing part of the last sentence at the end of page 2-12 is included in italics below. It was accidentally truncated by a page break inserted for Table 2.3-3. There was no other missing information.

Two toluene detections for samples from MWL-BW2 (0.310 and 0.570 µg/L), three for samples from MWL-MW8 (0.260 to 0.660 µg/L), two for TB samples (0.630 and 0.660 µg/L), and one for an EB sample (0.330 µg/L) were qualified with “U” as not *detected during data validation because of laboratory contamination identified in the laboratory method blank samples.*

During preparation of these comment responses a minor error in Table 2.4-2 (page 2-21) and Figure 2.4-5 (page 2-22) was also noted. The information in this table and figure summarizing field quality control (QC) blank sample results did not include the April 2010 MWL field QC blank samples. The corrected Table 2.4-2 is provided below in redline-strikeout format. This same information is repeated in the text box in the upper part of Figure 2.4-5. There were no changes to the corresponding text in the report.

Table 2.4-2
Summary of Toluene Results for Field QC Blank Samples

Field QC Blank Samples	Number of Detections	Number of Samples	% Detections	Number of DV-Qualified Detections	% Detections Including DV-Qualified Data	Concentration Range in µg/L
Equipment Blanks	19	269-271	7%	89	10%	0.194-10.6 ^a
Field Blanks	6	122-124	5%	5	9%	0.272-0.7
Trip Blanks	126	1453-1463	9%	2931	11%	0.184-1.21
TOTAL	151	1,844-1,858	—	4245	—	

^aTwo EB sample results exceeded 1 µg/L from CWL (5.16 µg/L, June 2008) and TA-V (10.6 µg/L, March 2005). All other EB results $\geq 0.882 \mu\text{g/L}$.

CWL = Chemical Waste Landfill.

µg/L = Microgram(s) per liter.

DV = Data Validation.

QC = Quality Control

EB = Equipment blank.

TA = Technical Area.

A revised version of the report is provided as a separate enclosure that incorporates the changes noted above and a brief note added to the Executive Summary explaining the reason for the revision. This report is being issued with "Revised October 2010" on the cover and is being distributed to all who received the August 2010 report.

2. Section 2.3.3.1 - This Section discusses results obtained from groundwater sampling conducted at the MWL in April 2010 related to the Purgung/Sampling Study. The Permittees must provide the laboratory data sheets reporting the results for all environmental samples, and all field and laboratory quality control samples associated with this sampling event related to the analysis of toluene.

Response: The laboratory data sheets (i.e., Certificates of Analysis) that contain the volatile organic compound (VOC) laboratory results for all environmental samples, field quality control samples (i.e., trip blanks [TB], field blanks [FB], and equipment blanks [EB]), and laboratory quality control samples for the April 2010 sampling event are provided as Attachment 1. The page numbering in the lower left corner of the data sheets reflects the page numbering in the final laboratory report; only requested data sheets are provided in Attachment 1.

Attachment 1

April 2010 MWL Groundwater Sampling Results

Laboratory Certificates of Analysis for VOC Samples

Attachment 1

April 2010 MWL Groundwater Sampling Results Laboratory Certificates of Analysis for VOC Samples

MWL Groundwater samples:

MWL-BW2, MWL-MW4, and MWL-MW8

MWL Field Quality Control Samples:

MWL-FB2, MWL-EB2, and MWL-TB6 through 10

**Qualifier Definition Report
for**
SNLS003 Sandia National Labs (691436)
Client SDG: 251783 GEL Work Order: 251783

The Qualifiers in this report are defined as follows:

- * Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.
- ** Indicates analyte is a surrogate compound.
- B The analyte was found in the blank above the effective MDL.
- J Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL
- U Analyzed for but undetected
- U The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this case narrative:

Notes:

RER is calculated at the 95% confidence level (2-sigma).

The Qualifiers in this report are defined as follows:

* Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.

** Indicates analyte is a surrogate compound.

QC Summary

Workorder: 251783

Page 5 of 5

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	T
<	For less than value for Flashpoint										
B	The analyte was found in the blank above the effective MDL.										
H	Analytical holding time was exceeded										
J	Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL										
L	Low Abundance Qualifier										
P	The response between the confirmation column and the primary column is >40%D										
U	The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level										
X	Data rejected due to interference.										
X	Data rejected due to low abundance.										
X	Data rejected due to peak not meeting identification criteria.										
X	Presumptive evidence that the analyte is not present. Please see narrative for further information.										
X	Presumptive evidence that the analyte is not present. Please see narrative for further infomration.										
X	Uncertain identification for gamma spectroscopy.										
Z	Paint Filter Test—Particulates passed through the filter, however no free liquids were observed.										
Z	The percent difference is greater than 70%.										
d	The 2:1 depletion requirement was not met for this sample										
h	Prep holding time exceeded										

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

**Qualifier Definition Report
for**
SNLS003 Sandia National Labs (691436)
Client SDG: 251783-1 GEL Work Order: 252009

The Qualifiers in this report are defined as follows:

* Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.

** Indicates analyte is a surrogate compound.

U Analyzed for but undetected

U The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level

DL Indicates that sample is diluted.

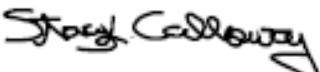

RA Indicates that sample is re-analyzed without re-extraction.

RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this case narrative:

Notes:

RER is calculated at the 95% confidence level (2-sigma).

The Qualifiers in this report are defined as follows:

* Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.

** Indicates analyte is a surrogate compound.

QC Summary

Workorder: 252009

Page 5 of 5

Parname	NOM	Sample Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
B	The analyte was found in the blank above the effective MDL.									
H	Analytical holding time was exceeded									
J	Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL									
P	The response between the confirmation column and the primary column is >40%D									
U	The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level									
X	Presumptive evidence that the analyte is not present. Please see narrative for further information.									
Z	The percent difference is greater than 70%.									
d	The 2:1 depletion requirement was not met for this sample									
h	Prep holding time exceeded									

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

**Qualifier Definition Report
for**

SNLS003 Sandia National Labs (691436)
Client SDG: 251426 GEL Work Order: 251426

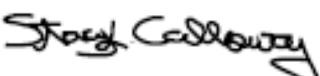

The Qualifiers in this report are defined as follows:

- * Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.
- ** Indicates analyte is a surrogate compound.
- B The analyte was found in the blank above the effective MDL.
- J Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL
- U Analyzed for but undetected
- U The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this case narrative:

Notes:

RER is calculated at the 95% confidence level (2-sigma).

The Qualifiers in this report are defined as follows:

- * Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.
- ** Indicates analyte is a surrogate compound.
- < For less than value for Flashpoint
- B The analyte was found in the blank above the effective MDL.
- H Analytical holding time was exceeded
- J Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL
- L Low Abundance Qualifier

QC Summary

Workorder: 251426

Page 7 of 7

Parname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
P	The response between the confirmation column and the primary column is >40%D										
U	The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level										
X	Data rejected due to interference.										
X	Data rejected due to low abundance.										
X	Data rejected due to peak not meeting identification criteria.										
X	Presumptive evidence that the analyte is not present. Please see narrative for further information.										
X	Presumptive evidence that the analyte is not present. Please see narrative for further infromation.										
X	Uncertain identification for gamma spectroscopy.										
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.										
Z	The percent difference is greater than 70%.										
d	The 2:1 depletion requirement was not met for this sample										
h	Prep holding time exceeded										

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

**Qualifier Definition Report
for**
SNLS003 Sandia National Labs (691436)
Client SDG: 251426-1 GEL Work Order: 251644

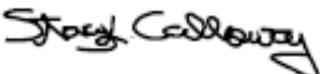

The Qualifiers in this report are defined as follows:

- * Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.
- ** Indicates analyte is a surrogate compound.
- U Analyzed for but undetected
- U The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this case narrative:

Notes:

RER is calculated at the 95% confidence level (2-sigma).

The Qualifiers in this report are defined as follows:

* Recovery or %RPD not within acceptance limits and/or spike amount not compatible with the sample or the duplicate RPD's are not applicable where the concentration falls below the effective PQL.

** Indicates analyte is a surrogate compound.

B The analyte was found in the blank above the effective MDL.

H Analytical holding time was exceeded

J Estimated value, the analyte concentration fell above the effective MDL and below the effective PQL

P The response between the confirmation column and the primary column is >40%D

U The analyte was analyzed for but not detected below this concentration. For Organic and Inorganic analytes the result is less than the effective MDL. For radiochemical analytes the result is less than the Decision Level

QC Summary

Workorder: **251644**

Page 7 of 7

Parname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
---------	-----	--------	------	----	-------	------	------	-------	-------	------	------

- | | |
|---|---|
| X | Presumptive evidence that the analyte is not present. Please see narrative for further information. |
| Z | The percent difference is greater than 70%. |
| d | The 2:1 depletion requirement was not met for this sample |
| h | Prep holding time exceeded |

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.
